SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for an extension of a current information collection.

The Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) authorizes the Gulf of Mexico Fishery Management Council (Council) to prepare and amend fishery management plans for any fishery in waters under its jurisdiction. NMFS manages the commercial shrimp fishery in Federal waters of the Gulf of Mexico (Gulf) under the Fishery Management Plan for the Shrimp Fishery of the Gulf. The electronic logbook (ELB) regulations for the Gulf shrimp fishery may be found at 50 CFR 622.51(a)(2). The ELB is a device that records the position of the vessel every ten minutes. The tracks of the vessels can be examined to determine when and where shrimp trawling is occurring.

As of May 1, 2023, there are approximately 1,319 valid or renewable Federal permits to commercially harvest shrimp from the exclusive economic zone (EEZ) in the Gulf. Monitoring shrimp vessels, operating together with many other fishing vessels of differing sizes, gears types used, and fishing capabilities, is made even more challenging by seasonal variability in shrimp abundance and price, and the broad geographic distribution of the fleet. ELBs provide a precise means of estimating the amount of shrimp fishing effort. Using ELBs to estimate fishing effort serves an important role to help estimate bycatch in the Gulf shrimp fleet.

II. Method of Collection

The ELB unit automatically collects fishing effort data on a Secure Digital (SD) card. Twice per year the NMFS Galveston Laboratory mails replacement SD cards to the permit holders. The card in the ELB unit must be removed by the shrimper and mailed to the NMFS Galveston Laboratory, and replaced in the unit by the newly one received.
